CLINICAL PATIENT JOURNEY

Patient ID: 10021487

Generated: November 06, 2025 at 04:42 PM

Database: clinicalknowledgegraph

PATIENT INFORMATION - Subject ID: 10021487

A **43** year old **m** patient had a total of **6** hospital admission(s) during the recorded period.

Emergency Department Visit #1

Admission Time: December 02, 2116 at 10:57 PM

This is the patient's **1st** Emergency Department visit. The patient arrived via **AMBULANCE**. The patient departed at **2116-12-03 01:02:00**, staying for a duration of **0 days 2 hours 5 minutes**.

Initial Assessment:

Chief Complaint: CAR VS POLE

Medications Administered: December 02, 2116 at 11:48 PM

Total of **23** medication(s) administered:

- Propofol
- Propofol
- Midazolam
- Midazolam
- Fentanyl Citrate
- Fentanyl Citrate
- Midazolam
- Midazolam
- Fentanyl Citrate
- Fentanyl Citrate
- PHENYLEPHrine
- PHENYLEPHrine
- PHENYLEPHrine
- PHENYLEPHrine
- Phenylephrine
- PHENYLEPHrine
- PHENYLEPHrine

• Fentanyl Citrate

• Fentanyl Citrate

• Midazolam

• Midazolam

• Propofol

• Propofol

Procedure(s) Performed: December 03, 2116 at 12:00 AM

9 procedure(s) performed (Source: ICD):

• Other laparotomy

• Other destruction of lesion of liver

• Open and other right hemicolectomy

• Reopening of recent laparotomy site

• Other repair of mesentery

• Peritoneal lavage

• Insertion of endotracheal tube

• Continuous invasive mechanical ventilation for 96 consecutive hours or more

• Venous catheterization, not elsewhere classified

---

*Time gap of **23 minutes** since last event*

Hospital Admission #1

Admission Time: December 03, 2116 at 12:23 AM

This is the patient's **1st** hospital admission. The patient was admitted from **EMERGENCY ROOM** as an **EW EMER.** admission. The admitting provider was **P68RWG**. Insurance coverage: **Private**. Chief complaint: **N/A**. The primary service provided was **SURGERY**.

Race: **WHITE**, Marital Status: **MARRIED**, Language: **English**

APR DRG Code:

Code: 911

Description: EXTENSIVE ABDOMINAL OR THORACIC PROCEDURES FOR MULTIPLE SIGNIFICANT TRAUMA

Severity: 4.0

Mortality Risk: 4.0

HCFA DRG Code:

Code: 957

Description: OTHER O.R. PROCEDURES FOR MULTIPLE SIGNIFICANT TRAUMA W MCC

Patient Past History:

Past Medical History: s/p Left ankle ORIF, s/p removal of adenoids

Family History: Noncontributory

Social History: N/A

History of Present Illness:

car vs pole, ejected ~30ft, garbled speech at scene, +EtOH, transfer from OSH with C6 fracture, free fluid in abd/pelvis, hypotension . Per EMS was moving all 4 extremities at OSH. Taken to OR upon admission, found liver lacs and performed ileocecectomy. Brought to TICU intubated. Taken to OR for re-exploration on , evacuated ~1L old blood.

Admission Vital Signs:

General Appearance	Intubated and sedated
Blood Pressure	N/A mmHg
Heart Rate	N/A bpm
Respiratory Rate	N/A breaths/min
Temperature	N/A°F
Oxygen Saturation	N/A

Admission Laboratory Results:

• WBC: 10.8

• Glucose: 138

Admission Medications:

Total of **2** medications on admission:

• Multivitamin

• Vitamin D

Procedure(s) Performed: December 03, 2116 at 12:25 AM

1 procedure(s) performed (Source: ICU_EVENTS):

• Intubation/Extubation (Task) - Intubation with value 1.0

ICU Admission - Trauma SICU (TSICU)

ICU Admission Time: December 03, 2116 at 01:02 AM

The patient was admitted to the **Intensive Care Unit (Trauma SICU (TSICU))**. The patient remained in ICU until **2116-12-18 17:34:03**, for a total ICU stay of **15 days 16 hours 32 minutes** (Length of Stay: **15.688923611111113 days**). During this critical care period, intensive monitoring and interventions were performed including procedures, laboratory tests, and microbiology events.

Laboratory Tests Performed: December 03, 2116 at 01:16 AM

Total of **32** tests performed, with **12** abnormal result(s).

Chemistry

Test	Value	Reference Range
Anion Gap	19.0mEq/L	8.0-20.0
Bicarbonate	**16.0mEq/L**	22.0-32.0
Calcium, Total	**7.0mg/dL**	8.4-10.3
Chloride	106.0mEq/L	96.0-108.0
CK-MB Index	1.4%	0.0-6.0
Creatine Kinase (CK)	**4439.0IU/L**	47.0-322.0
Creatine Kinase, MB Isoenzyme	**62.0ng/mL**	0.0-10.0
Creatinine	1.2mg/dL	0.5-1.2
Glucose	**138.0mg/dL**	70.0-100.0
Magnesium	1.9mg/dL	1.6-2.6
Phosphate	**4.6mg/dL**	2.7-4.5
Potassium	4.8mEq/L	3.3-5.1
Sodium	136.0mEq/L	133.0-145.0

Troponin T	**0.04ng/mL**	0.0-0.01
Urea Nitrogen	14.0mg/dL	6.0-20.0

Hematology

Test	Value	Reference Range
INR(PT)	1.1	0.9-1.1
PT	11.7sec	9.4-12.5
PTT	25.6sec	25.0-36.5
Basophils	0.2%	0.0-2.0

RESPIRATORY CULTURE: Mini-BAL:

• STAPH AUREUS COAG +

• STAPH AUREUS COAG +

• STAPH AUREUS COAG + | TRIMETHOPRIM/SULFA=0.5(S)

• STAPH AUREUS COAG + | GENTAMICIN=0.5(S)

• STAPH AUREUS COAG + | OXACILLIN=0.5(S)

• STAPH AUREUS COAG + | LEVOFLOXACIN=0.12(S)

GRAM STAIN: Mini-BAL:

• [redacted]

LEGIONELLA CULTURE: Mini-BAL:

• NO LEGIONELLA ISOLATED.

POTASSIUM HYDROXIDE PREPARATION: Mini-BAL:

• Test cancelled by laboratory. PATIENT CREDITED. This is a low yield procedure based on our in-house studies. if pulmonary Histoplasmosis, Coccidioidomycosis, Blastomycosis, Aspergillosis or Mucormycosis is strongly suspected, contact the Microbiology Laboratory ([redacted]).

Immunofluorescent test for Pneumocystis jirovecii (carinii): Mini-BAL:

• NEGATIVE for Pneumocystis jirovecii (carinii).

FUNGAL CULTURE: Mini-BAL:

• NO FUNGUS ISOLATED.

ACID FAST SMEAR: Mini-BAL:

• NO ACID FAST BACILLI SEEN ON CONCENTRATED SMEAR.

ACID FAST CULTURE: Mini-BAL:

• NO MYCOBACTERIA ISOLATED.

VIRAL CULTURE: R/O CYTOMEGALOVIRUS: Mini-BAL:

• No Cytomegalovirus (CMV) isolated.

CYTOMEGALOVIRUS EARLY ANTIGEN TEST (SHELL VIAL METHOD): Mini-BAL:

• Negative for Cytomegalovirus early antigen by immunofluorescence. Refer to culture results for further information.

• NO GROWTH.

Microbiology Tests Performed: December 14, 2116 at 05:01 PM

Total of **1** microbiology result(s):

Blood Culture, Routine: BLOOD CULTURE:

• NO GROWTH.

Procedure(s) Performed: December 14, 2116 at 05:05 PM

3 procedure(s) performed (Source: ICU_EVENTS):

• Procedures (Task) - Blood Cultured with value 1.0

• Procedures (Task) - Blood Cultured with value 1.0

• Procedures (Task) - Urine Culture with value 1.0

Prescriptions Ordered: December 14, 2116 at 06:00 PM

1 medication(s) prescribed:

• Propofol 1000 mg IV DRIP

Laboratory Tests Performed: December 15, 2116 at 02:13 AM

Total of **28** tests performed, with **16** abnormal result(s).

Chemistry

Test	Value	Reference Range
Alanine Aminotransferase (ALT)	**59.0IU/L**	0.0-40.0
Alkaline Phosphatase	79.0IU/L	40.0-130.0
Anion Gap	10.0mEq/L	8.0-20.0
Asparate Aminotransferase (AST)	**109.0IU/L**	0.0-40.0
Bicarbonate	29.0mEq/L	22.0-32.0
Bilirubin, Total	**2.7mg/dL**	0.0-1.5
Calcium, Total	**7.3mg/dL**	8.4-10.3
Chloride	**113.0mEq/L**	96.0-108.0
Creatinine	0.9mg/dL	0.5-1.2
Glucose	**142.0mg/dL**	70.0-100.0
Lactate Dehydrogenase (LD)	**416.0IU/L**	94.0-250.0
Magnesium	2.3mg/dL	1.6-2.6
Phosphate	3.3mg/dL	2.7-4.5
Potassium	3.9mEq/L	3.3-5.1
Sodium	**148.0mEq/L**	133.0-145.0
Urea Nitrogen	**28.0mg/dL**	6.0-20.0

Hematology

Test	Value	Reference Range

• Sodium Chloride 0.9% Flush 3 mL IV

Prescriptions Ordered: December 18, 2116 at 08:00 PM

1 medication(s) prescribed:

• Furosemide 40 mg IV 2.0x/day

Prescriptions Ordered: December 19, 2116 at 10:00 AM

2 medication(s) prescribed:

• Furosemide 40 mg IV 1.0x/day

• Furosemide 40 mg PO/NG 1.0x/day

Prescriptions Ordered: December 19, 2116 at 04:00 PM

2 medication(s) prescribed:

• Acetaminophen 500 mg PO/NG

• HYDROmorphone (Dilaudid) 2-4 mg PO/NG

Microbiology Tests Performed: December 19, 2116 at 05:13 PM

Total of **1** microbiology result(s):

WOUND CULTURE: CATHETER TIP-IV:

• No significant growth.

Prescriptions Ordered: December 19, 2116 at 08:00 PM

1 medication(s) prescribed:

• DiphenhydrAMINE 25 mg PO/NG 1.0x/day

Prescriptions Ordered: December 20, 2116 at 10:00 AM

1 medication(s) prescribed:

• Potassium Chloride 40 mEq PO 1.0x/day

Prescriptions Ordered: December 20, 2116 at 07:00 PM

1 medication(s) prescribed:

• Albuterol Inhaler 2 PUFF IH

Prescriptions Ordered: December 21, 2116 at 11:00 AM

2 medication(s) prescribed:

• MetRONIDAZOLE (FLagyl) 500 mg PO 3.0x/day

• Neutra-Phos 2 PKT PO/NG 1.0x/day

Prescriptions Ordered: December 21, 2116 at 02:00 PM

1 medication(s) prescribed:

• Calcium Carbonate 500 mg PO/NG 3.0x/day

Prescriptions Ordered: December 21, 2116 at 05:00 PM

1 medication(s) prescribed:

• Senna 5 mL PO/NG

Prescriptions Ordered: December 21, 2116 at 06:00 PM

1 medication(s) prescribed:

• HYDROmorphone (Dilaudid) 4 mg PO 1.0x/day

Prescriptions Ordered: December 22, 2116 at 09:00 AM

2 medication(s) prescribed:

• Neutra-Phos 1 PKT PO 1.0x/day

• 0.9% Sodium Chloride 1 BAG IV 1.0x/day

Microbiology Tests Performed: December 22, 2116 at 09:09 PM

FLUID CULTURE: PLEURAL FLUID:

• STAPHYLOCOCCUS, COAGULASE NEGATIVE

GRAM STAIN: PLEURAL FLUID:

• 1+ (<1 per 1000X FIELD): POLYMORPHONUCLEAR LEUKOCYTES. NO MICROORGANISMS SEEN.

ANAEROBIC CULTURE: PLEURAL FLUID:

• NO ANAEROBES ISOLATED.

Discharge Summary

Discharge Time: December 28, 2116 at 01:19 PM

The patient was discharged from **Med/Surg/Trauma** with disposition to **Home**.

Major Procedure(s) During Admission: Exploratory laparotomy, washout of hemoperitoneum, debridement of laceration of the liver, ileocecectomy, ileocolostomy. Take back for Exploratory laparotomy, ileocectomy. drainage of subhepatic/ right paracolic gutter collection

Known Allergies: Penicillins

Detailed Allergy List:

• Penicillins

Discharge Diagnoses:

Primary Diagnoses:

• Polytrauma s/p motor vehicle crash

• Bilateral pulmonary contusions

• Right rib fractures

• Left rib fractures

• Fracture of C-spine at C6

• Transverse process fracture T12-L5

• Subcapsular liver hematoma

• Segment 6 liver laceration (4cm)

• Ileal mesenteric tear with small bowel ischemia

• Blunt cardiac injury

• Adrenal hematoma

Complete Diagnosis List:

- Injury to other intra-abdominal organs without mention of open wound into cavity, peritoneum
- Traumatic shock
- Injury to liver without mention of open wound into cavity, hematoma and contusion
- Acute and subacute necrosis of liver
- Acute vascular insufficiency of intestine
- Methicillin susceptible pneumonia due to Staphylococcus aureus
- Acute respiratory failure following trauma and surgery
- Acute kidney failure with lesion of tubular necrosis
- Traumatic anuria
- Closed fracture of four ribs
- Closed fracture of dorsal [thoracic] vertebra without mention of spinal cord injury
- Closed fracture of lumbar vertebra without mention of spinal cord injury
- Closed fracture of sixth cervical vertebra
- Rhabdomyolysis
- Acidosis
- Cardiac complications, not elsewhere classified
- Right bundle branch block
- Tachycardia, unspecified
- Other iatrogenic hypotension
- Traumatic hemothorax without mention of open wound into thorax
- Closed dislocation, multiple cervical vertebrae
- Injury to liver without mention of open wound into cavity laceration, unspecified
- Other chronic nonalcoholic liver disease
- Injury to other intra-abdominal organs without mention of open wound into cavity, adrenal gland
- Unspecified injury of heart without mention of open wound into thorax
- Contusion of lung without mention of open wound into thorax
- Injury to other gastrointestinal sites, without mention of open wound into cavity
- Hyperpotassemia
- Edema of male genital organs
- Contact dermatitis and other eczema due to plants [except food]
- Accidental poisoning from other specified plants
- Other fluid overload

• Alcohol abuse, unspecified

• Other motor vehicle traffic accident involving collision on the highway injuring driver of motor vehicle other than motorcycle

• Personal history of allergy to penicillin

Hospital Course:

Mr. was admitted to the trauma ICU on with the following injuries: Bilateral pulmonary contusions Right rib fractures Left rib fractures Fracture of C-spine at C6 Transverse process fracture T12-L5 Subcapsular liver hematoma Segment 6 liver laceration (4cm) Ileal mesenteric tear with small bowel ischemia Blunt cardiac injury Adrenal hematoma In brief, he was taken to the operating room on admission from the ED. There was a large mesenteric tear and associated small bowel ischemia. This was resected; he had a ileo cecectomy with primary anastomosis. He also was noted to have a liver laceration with associated liver ischemia, this was debrided. Post-op he was monitored in the ICU and was noted to be persistently tachycardic with an increasing pressor requirement. His lactate was elevated and rising and he was taken back to the OR for a look laparotomy, also on . Approximately 1 liter of blood was found and an internal hernia. He was hemostatic at the end of the case and he was returned to the ICU. The rest of his hospital course by systems below, but in brief was characterized by a prolonged wean from the ventilator, finally extubated on and liver necrosis and eventual fluid collection which was drained by . His course is described below by system: Neuro: He was initially sedated while intubated with a combination of propofol, fentanyl and versed but this was weaned as appropriate and after extubation he was treated with Dilaudid for pain. Orthopedic Spine evaluation was requested for the cervical spine fracture- this was treated non operatively with a cervical collar. He will follow up in approx 4 weeks with Dr. have repeat spine films done. He was alert and oriented x 3 and neurologically intact with some bilateral upper extremity weakness that had improved during his admission. Cardiac: Patient was hypotensive during the initial days postop and required pressors. He was weaned off Levophed on POD#3. Echo was performed to evaluate for blunt cardiac injury and the heart appeared hyperdynamic with no wall motion abnormalities. Patient was resuscitated with PRBC and albumin. He remained hemodynamically stable throughout the rest of his hospital course. Resp: He was intubated initially on scene then remained intubated post-operatively through two trips to the OR. Initially requiring high PEEPs this was eventually weaned though he continued to struggle with poor oxygenation and inability to wean from the vent, likely due to a combination of pneumonia (noted on CXR, BAL after bronch on grew MSSA) and fluid overload. He was placed on a Lasix drip to remove excess fluid and treated with levofloxacin (started on for the pneumonia; he was eventually weaned to extubation on . He remained on 40mg PO Lasix daily while on the floor and continued to diurese well. He was changed to diamox on to avoid hypercarbia. His supplemental oxygen was weaned and his oxygen saturation remained stable on room air. Continued pulmonary toileting and incentive spirometry were encouraged. On he underwent diagnostic and therapeutic thoracentesis for 1.5L and he symptomatically improved with saturations remaining in the mid to high 90's. Follow up CXR showed interval decrease in right pleural effusion with no evidence of pneumothorax after thoracentesis. GI: Patient was taken for emergent laparotomy on the night of admission. Postop, patient had persistent lactic acidosis and hypotension. Patient was taken back to OR for re-exploration, also on , as noted above. He started to spike temperatures on . In combination with his downtrending Hct (to 24), a CT scan was obtained on it showed a fluid collection near a necrotic portion of the liver with fluid in the right paracolic gutter. Hepatobiliary surgery was consulted and recommended a triple phase CT to assess progression of the liver ischemia/necrosis one week later (this was done on to aid in surgical planning regarding debridement. He was taken by on for drainage of the fluid collection near the drain. Cultures grew mixed bacteria as well as b. fragilis (he was started on Flagyl on along

with levofloxacin). He had a triple phase CT on which demonstrated progression of necrosis with expected walling off/organization of the liver necrosis. Also of note on , the drainage from his liver collection drain (placed by changed from serosanguinous/yellow to thicker brown. There was concern that this was stool from a leak in his anastomosis, so he was sent down urgently for a CT scan with contrast injected through the drain. The contrast did not enter the bowel which was reassuring. The drainage color change was attributed to additional necrosis of the liver which was now sloughing off and draining through the drain. On transfer to the floor on his tube feeds were discontinued and he was started on a regular diet. Nutritional supplements were added. He tolerated a regular diet and was started on a bowel regimen. He was discharged to home with the drainage catheter in place, teaching was provided to patient and his wife on the and monitoring of the drainage catheter system. GU: On admission, patient was in acute renal failure with rhabdomyolysis. He was aggressively hydrated and his creatinine improved with downtrend in his CK from 12,0000 to 700 after which the level was no longer checked as his urine output was excellent and his creatinine normalized. His urine output was normal throughout his stay. On the floor he was diuresed as discussed above under respiratory. A Foley catheter remained in place for urine output monitoring until , at which time it was removed and he voided without difficulty. He was noted with scrotal edema primarily related to fluid overload; this did eventually improve significantly with intermittent diuresis using Lasix which was later changed to Diamox. ID: Patient began to spike fevers on POD#4. He was started on levofloxacin, as noted above, for an MSSA pneumonia and completed a 7 day course that was dc'd on . The Flagyl was also started on due to the cultures from the drain growing bacteroides. This was continued until . At time of discharge he was afebrile with a normal white count of 8.2. MSK: He was evaluated by Physical ad Occupational therapy and at time of discharge he was supervision level with the walker. Dispo: He was discharged home with his wife and was provided with follow up appointments with his PCP, surgery and Orthopedic Spine.

Microbiology Findings:

BAL after bronchoscopy grew MSSA. Cultures from fluid collection drain grew mixed bacteria as well as b. fragilis.

Antibiotic Plan:

Patient completed a 7-day course of levofloxacin and a course of Flagyl during admission. No ongoing antibiotic plan mentioned for discharge.

Discharge Status:

Activity Status	Ambulatory - requires assistance or aid (walker or cane).
Level of Consciousness	Alert and interactive.
Mental Status	Clear and coherent.
Code Status	N/A

Discharge Instructions:

You were admitted to the hospital after a motor vehicle crash. You sustained multiple injuries including fractures in your neck, spine, ribs and an injury to your bowel and liver. You required an operation to repair your abdominal injury. You required a stay in the intensive unit and were transferred to the surgical floor when stable. You are continuing to recover well from your accident and are now being discharged home with the following instructions: You should remain in the cervical collar until follow up with Orthopedic Spine Surgery. Please follow up with Dr. at the appointment scheduled below. You sustained rib fractures which can cause severe pain and subsequently cause you to take shallow breaths because of the pain. You should take your pain medicine as as directed to stay ahead of the pain otherwise you won't be able to take deep breaths. If the pain medication is too sedating, take half the dose and notify your physician. Pneumonia is a complication of rib fractures. In order to decrease your risk you must use your incentive spirometer 4 times every hour while awake. This will help expand the small airways in your lungs and assist in coughing up secretions that pool in the lungs. You will be more comfortable if you use a cough pillow to hold against your chest and guard your rib cage while coughing and deep breathing. Symptomatic relief with ice packs or heating pads for short periods may ease the pain. Do NOT smoke. Return to the ED right away for any acute shortness of breath, increased pain or crackling sensation around your rips (crepitus). Narcotic pain medication can cause constipation. Thefore you should take a stool softener twice daily and increase your fluid and fiber intake if possible. If your doctor allows, non steriodal drugs are very effective in controlling pain (i.e. Ibuprofen, Motrin, Advil, Aleve, Naprosyn) but they have their own set of side effects so make sure your doctor approves. General Drain : *Please look at the site every day for signs of infection (increased redness or pain, swelling, odor, yellow or bloody discharge, warm to touch, fever). *If the drain is connected to a collection container, please note color, consistency, and amount of fluid in the drain. Call the doctor if the amount increases significantly or changes in character. Be sure to empty the drain frequently. Record the output, if instructed to do so. *Measure and record the output from the catheter every day and be sure to bring a log/diary of this information with you to your Acute Surgery Clinic follow up. *Wash the area gently with warm, soapy water. *Keep the insertion site clean and dry otherwise. *Avoid swimming, baths, hot tubs; do not submerge yourself in water. *Make sure to keep the drain attached securely to your body to prevent pulling or dislocation. You sustained rib fractures which can cause severe pain and subsequently cause you to take shallow breaths because of the pain. You should take your pain medicine as as directed to stay ahead of the pain otherwise you won't be able to take deep breaths. If the pain medication is too sedating, take half the dose and notify your physician. Pneumonia is a complication of rib fractures. In order to decrease your risk you must use your incentive spirometer 4 times every hour while awake. This will help expand the small airways in your lungs and assist in coughing up secretions that pool in the lungs. You will be more comfortable if you use a cough pillow to hold against your chest and guard your rib cage while coughing and deep breathing. Symptomatic relief with ice packs or heating pads for short periods may ease the pain. Do NOT smoke. Return to the ED right away for any acute shortness of breath, increased pain or crackling sensation around your rips (crepitus). Narcotic pain medication can cause constipation. Thefore you should take a stool softener twice daily and increase your fluid and fiber intake if possible. ACTIVITY: Do not drive until you have stopped taking pain medicine and feel you could respond in an emergency. You may climb stairs. You may go outside, but avoid traveling long distances until you see your surgeon at your next visit. Don't lift more than lbs for weeks. (This is about the weight of a briefcase or a bag of groceries.) This applies to lifting children, but they may sit on your lap. You may start some light exercise when you feel comfortable. You will need to stay out of bathtubs or swimming pools for a time while your incision is healing. Ask your doctor when you can resume tub baths or swimming. Heavy exercise may be started after 6 weeks, but use common sense and go slowly at first. HOW YOU MAY FEEL: You may feel weak or "washed out" for 6 weeks. You might want to nap often. Simple tasks may exhaust you. You may have a sore throat because of a tube that was in your throat during surgery. You might have trouble concentrating or difficulty sleeping. You might feel somewhat depressed. You could have a poor appetite for a while. Food may seem

unappealing. All of these feelings and reactions are normal and should go away in a short time. If they do not, tell your surgeon. YOUR INCISION: Do not remove steri-strips for 2 weeks. (These are the thin paper strips that might be on your incision.) But if they fall off before that that's okay. Your incision may be slightly red around the stitches. This is normal. You may gently wash away dried material around your incision. It is normal to feel a firm ridge along the incision. This will go away. Avoid direct sun exposure to the incision area. Do not use any ointments on the incision unless you were told otherwise. You may see a small amount of clear or light red fluid staining your dressing or clothes. If the staining is severe, please call your surgeon. You may shower. As noted above, ask your doctor when you may resume tub baths or swimming. Ove the next months, your incision will fade and become less prominent. YOUR BOWELS: Constipation is a common side effect of medicine such as Percocet or codeine. If needed, you may take a stool softener (such as Colace, one capsule) or gentle laxative (such as milk of magnesia, 1 tbs) twice a day. You can get both of these medicines without a prescription. If you go 48 hours without a bowel movement, or have pain moving the bowels, call your surgeon. PAIN MANAGEMENT: It is normal to feel some discomfort/pain following abdominal surgery. This pain is often described as "soreness". Your pain should get better day by day. If you find the pain is getting worse instead of better, please contact your surgeon. You will receive a prescription from your surgeon for pain medicine to take by mouth. It is important to take this medicine as directied. Do not take it more frequently than prescribed. Do not take more medicine at one time than prescribed. Your pain medicine will work better if you take it before your pain gets too severe. Talk with your surgeon about how long you will need to take prescription pain medicine. Please don't take any other pain medicine, including non-prescription pain medicine, unless your surgeon has said its okay. If you are experiencing no pain, it is okay to skip a dose of pain medicine. Remember to use your "cough pillow" for splinting when you cough or when you are doing your deep breathing exercises. If you experience any of the folloiwng, please contact your surgeon: - sharp pain or any severe pain that lasts several hours - pain that is getting worse over time - pain accompanied by fever of more than 101 - a drastic change in nature or quality of your pain DANGER SIGNS: Please call your surgeon if you develop: - worsening abdominal pain - sharp or severe pain that lasts several hours - temperature of 101 degrees or higher - severe diarrhea - vomiting - redness around the incision that is spreading - increased swelling around the incision - excessive bruising around the incision - cloudy fluid coming from the wound - bright red blood or foul smelling discharge coming from the wound - an increase in drainage from the wound

New Medications Started:

• Colace 100 mg Capsule PO twice a day as needed for constipation.

• magnesium hydroxide 400 mg/5 mL Suspension Thirty (30) ML PO Q6H (every 6 hours) as needed for constipation.

• hydromorphone 2 mg Tablet PO Q3H (every 3 hours) as needed for pain.

• multivitamin Capsule PO once a day.

• Vitamin D3 4

• 000 unit Capsule PO once a day.

• senna 8.6 mg Tablet PO once a day as needed for constipation.

• clobetasol 0.05 % Cream Topical BID (2 times a day).

• quetiapine 25 mg Tablet PO QHS (once a day (at bedtime)) as needed for insomnia.

Medications Stopped:

• propofol

• fentanyl

• versed

• Levophed

• levofloxacin

• Flagyl

Medications to Avoid:

• non steroidal anti-inflammatory drugs (i.e. Ibuprofen
• Motrin
• Advil
• Aleve
• Naprosyn) unless approved by doctor

*Time gap of **30 days, 4 hours, 59 minutes** since last event*

Emergency Department Visit #2

Admission Time: January 27, 2117 at 06:19 PM

This is the patient's **2nd** Emergency Department visit. The patient arrived via **WALK IN**. The patient departed at **2117-01-28 01:23:00**, staying for a duration of **0 days 7 hours 4 minutes**.

Initial Assessment:

Chief Complaint: ABD PAIN, Necrotic liver lesion post trauma

Blood Pressure	110.0/69.0 mmHg
Heart Rate	106.0 bpm
Respiratory Rate	16.0 breaths/min
Oxygen Saturation	97.0%
Temperature	99.8°F
Pain Score	8
Acuity Level	3.0

Previous Medications on Record: January 27, 2117 at 06:52 PM

5 medication(s) documented:

• calcium - Minerals and Electrolytes - Calcium Replacement

• cholecalciferol (vitamin D3) [Vitamin D3] - Vitamins - D Derivatives

• docusate sodium [Colace] - Laxative - Surfactant

• hydromorphone - Analgesic Opioid Agonists

• multivitamin [One-A-Day Essential] - Multivitamins

Laboratory Tests Performed: January 27, 2117 at 07:00 PM

Total of **35** tests performed, with **14** abnormal result(s).

Chemistry

Test	Value	Reference Range

Alanine Aminotransferase (ALT)	11.0IU/L	0.0-40.0
Albumin	**2.8g/dL**	3.5-5.2

*Time gap of **2 hours, 16 minutes** since last event*

Hospital Admission #2

Admission Time: January 28, 2117 at 12:19 AM

This is the patient's **2nd** hospital admission. The patient was admitted from **EMERGENCY ROOM** as an **EW EMER.** admission. The admitting provider was **P776MJ**. Insurance coverage: **Private**. Chief complaint: **Necrotic liver lesion post trauma**. The primary service provided was **SURGERY**.

Race: **WHITE**, Marital Status: **MARRIED**, Language: **English**

APR DRG Code:

Code: 279

Description: HEPATIC COMA AND OTHER MAJOR ACUTE LIVER DISORDERS

Severity: 3.0

Mortality Risk: 1.0

HCFA DRG Code:

Code: 443

Description: DISORDERS OF LIVER EXCEPT MALIG,CIRR,ALC HEPA W/O CC/MCC

Patient Past History:

Past Medical History: s/p Left ankle ORIF, s/p removal of adenoids

Family History: Noncontributory

Social History: N/A

History of Present Illness:

s/p MVC on and was transferred from an OSH with multiple injuries. On admission for the trauma he was found to have an acute abdomen and was hypotensive so he was taken emergently to the operating room where he was found to have an avulsion the small bowel requiring resection and a multiple liver lacerations, which were packed, and debridement of liver fragments. He was then brought to the ICU and urgently brought back for ex-lap where 750 cc of fresh blood was found. It was thought that the bleeding was stopped and a small liver biopsy was taken. Post operatively patient was brought to the ICU and was re-scanned on and found to have large necrotic liver lesion, right posterior. On drain was placed. Patient was put on levo for MSSA that grew out of BAL and flagyl for B.frag that grew out of drain liver lesion. Antibiotics were completed on and pt was disharged on . Since that time he has been having intermittent fevers every day up to 101.7 as max the evening that resolve 1 hour after getting tylenol. On he noted new brown milky drainage from the catheter site and again had a temperature to 101.5. On he developed abdominal pain at the drain site and the RUQ. when he called the office he was instructed to come to the ED. He reports that he is passing gas and moving his bowels normally. the ED his abdominal pain began to resolve.

Admission Vital Signs:

General Appearance	A+Ox3
Blood Pressure	110/69 mmHg
Heart Rate	106 bpm
Respiratory Rate	16 breaths/min

Temperature	98.8°F
Oxygen Saturation	97 RA

Admission Laboratory Results:

• WBC: 6.9

• Glucose: 91

Admission Medications:

Total of **5** medications on admission:

Unit Admission - Transplant

Admission Time: January 28, 2117 at 01:23 AM

The patient was admitted to **Transplant** ward. The patient stayed in this unit until **2117-02-05 15:43:55**, for a total duration of **8 days 14 hours 20 minutes**. During this time, various procedures, laboratory tests, and microbiology events were performed.

Prescriptions Ordered: January 28, 2117 at 02:00 AM

5 medication(s) prescribed:

• HYDROmorphone (Dilaudid) 2-4 mg PO/NG

• NS 100 mL IV 3.0x/day

• Acetaminophen 325-650 mg PO/NG

• Sodium Chloride 0.9% Flush 3 mL IV

• 0.9% Sodium Chloride (Mini Bag Plus) 100 mL IV 1.0x/day

Microbiology Tests Performed: January 28, 2117 at 02:52 AM

Total of **1** microbiology result(s):

R/O VANCOMYCIN RESISTANT ENTEROCOCCUS: SWAB:

• No VRE isolated.

Microbiology Tests Performed: January 28, 2117 at 02:52 AM

Total of **9** microbiology result(s):

FLUID CULTURE: PERITONEAL FLUID:

• CANDIDA ALBICANS

• STREPTOCOCCUS ANGINOSUS (MILLERI) GROUP | PENICILLIN G=0.06(S)

2 procedure(s) performed (Source: ICD):

• Percutaneous aspiration of liver

• Other nonoperative replacements

Discharge Summary

Discharge Time: February 05, 2117 at 03:43 PM

The patient was discharged from **Transplant** with disposition to **Home**.

Major Procedure(s) During Admission: ['CT Guided Placement of Percutaneous transhepatic drains', 'Replacement of pigtail drain']

Known Allergies: Penicillins

Detailed Allergy List:

• Penicillins

Discharge Diagnoses:

Primary Diagnoses:

• Hepatic necrotic abscess

Secondary Diagnoses:

• s/p drainage and placment of 2 hepatic drains

Complete Diagnosis List:

• Abscess of liver

• Streptococcus infection in conditions classified elsewhere and of unspecified site, other streptococcus

Hospital Course:

s/p MVC with multiple injuries including liver lacerations with necrotic liver lesion and adjoining collection that has not been resolving. He was admitted to the for further management. IV Unasyn and Flagyl were started on . He was pan-cultured. CXR demonstrated right pleural effusion and air-fluid level in the RUQ compatible with known right hepatic lobe collection which was stable from previous CXR. An abdominal CT scan was done which showed no change in the size of a large complex hepatic collection with unchanged position of pigtail drain. (liver segment VI and VII 10.1 x 8.0 x 15.0 cm complex collection containing nondependent air and complex fluid extending along the inferior edge of the liver along the lateral conal fascia with a small drain within the fluid collection). Drain outputs averaged 150-190cc/day of beige thick drainage. Fluid from this drain were sent to micro. Culture isolated pan sensitive Strep anginosus . On , he underwent CT guided exchange over wire of an 8 catheter positioned within the most inferior anterior aspect of a right hepatic lobe abscess. A new 8 drainage catheter was placed into the more superior portion of the hepatic abscess. New drain fluid output was sent for culture. Postop procedure he spiked a temperature of 102. IV Vancomycin was added to his regimen. Outputs from the new drain averaged cc/day. Fluconazole was added on . New drain cultures isolated sparse streptococcus anginosus (MILLERI). Anaerobic culture isolated moderate growth of Prevotella, beta lactamase negative, and sparse growth Bacteroides fragilis, beta lactamase positive. The original catheter required repair by radiology for a cracked piece at the adapter. Two days later, the new drain (more medial/inferior drain) had dislodged approximately 1.5cm necessitating exchange over wire on . Vital signs remained stable. The drains were flushed with 10ml of saline bid. ID was consulted and recommended IV antibiotics for weeks for optimal coverage. However, the patient is from N.H. and does not have insurance, therefore an oral antibiotic regimen was recommended which consisted of Levaquin 750 mg QD, Flagyl 500 mg tid and Fluconazole 400 mg daily for 6 weeks with f/u CT and ID follow up. Scripts for 6 week course of these antibiotics were provided. In addition, applications for free or reduced drug supply from each pharmaceutical company for fluc/Flagyl and Levo were completed. He was also given scripts for 5 day supplies for antibiotics pending delivery of drugs to Dr. for patient to pick up at f/u visit on .

Antibiotic Plan:

ID was consulted and recommended IV antibiotics for weeks for optimal coverage. However, the patient is from N.H. and does not have insurance, therefore an oral antibiotic regimen was recommended which consisted of Levaquin 750 mg QD, Flagyl 500 mg tid and Fluconazole 400 mg daily for 6 weeks with f/u CT and ID follow up.

Discharge Status:

Activity Status	Ambulatory - Independent.
Level of Consciousness	Alert and interactive.
Mental Status	Clear and coherent.
Code Status	N/A

Discharge Instructions:

You were admitted to the hospital for care of your hepatic necrotic abscess. While you were in the hospital, your previous drain was upsized and another superior drain was placed. You will need to care for your drains by flushing with 10cc three times a day. You may shower with your drains but do not scrub or swim. You may wear regular clothing but avoid tugging/pulling. Please call if you have fevers, chills, rigors, pain, redness around the site, increased output, change in the color or consitency or signs of drain blockage.

New Medications Started:

- MetRONIDAZOLE (FLagyl) 500 mg PO Q8H
- Levofloxacin 750 mg PO Q24H

- Fluconazole 400 mg PO Q24H
- Acetaminophen 325-650 mg PO Q6H:PRN fever/pain

Medications Stopped:

- MVI

*Time gap of **262 days, 5 minutes** since last event*

Emergency Department Visit #3

Admission Time: October 25, 2117 at 03:49 PM

This is the patient's **3rd** Emergency Department visit. The patient arrived via **WALK IN**. The patient departed at **2117-10-25 22:53:00**, staying for a duration of **0 days 7 hours 4 minutes**.

Initial Assessment:

Chief Complaint: ABDOMINAL MASS, FEVER

Blood Pressure	119.0/93.0 mmHg
Heart Rate	114.0 bpm
Respiratory Rate	14.0 breaths/min
Oxygen Saturation	96.0%
Temperature	96.7°F
Pain Score	5
Acuity Level	3.0

Medications Administered: October 25, 2117 at 06:05 PM

Total of **8** medication(s) administered:

• Readi-Cat 2 (Barium Sul 2%)*

• MetRONIDAZOLE (Flagyl)

• Ciprofloxacin IV

• Morphine

• Acetaminophen

• Vancomycin

• Vancomycin

• Morphine

Previous Medications on Record: October 25, 2117 at 06:23 PM

4 medication(s) documented:

• acetaminophen - Analgesic or Antipyretic Non-Opioid

• docusate sodium [Colace] - Laxative - Surfactant

• ibuprofen [Advil] - NSAID Analgesics (COX Non-Specific) - Propionic Acid Derivatives

• oxycodone - Analgesic Opioid Agonists

---

*Time gap of **3 hours, 59 minutes** since last event*

Hospital Admission #5

Admission Time: October 25, 2117 at 10:22 PM

This is the patient's **5th** hospital admission. The patient was admitted from **EMERGENCY ROOM** as an **EW EMER.** admission. The admitting provider was **P07KMB**. Insurance coverage: **Medicaid**. Chief complaint: **Fevers, abdominal pain**. The primary service provided was **SURGERY**.

Race: **WHITE**, Marital Status: **DIVORCED**, Language: **English**

APR DRG Code:

Code: 721

Description: POST-OPERATIVE, POST-TRAUMATIC, OTHER DEVICE INFECTIONS

Severity: 2.0

Mortality Risk: 2.0

HCFA DRG Code:

Code: 862

Description: POSTOPERATIVE & POST-TRAUMATIC INFECTIONS W MCC

Patient Past History:

Past Medical History: MVC with liver lacs leading to necrotic liver lesion, PSH: Exploratory laparotomy, washout of hemoperitoneum, debridement of laceration of the liver, ileocecectomy, ileocolostomy., s/p Left ankle ORIF, s/p removal of adenoids, Exploratory laparotomy and lysis of adhesions., Debridement of liver., Ileocolectomy with ileocolonic anastomosis

Family History: Noncontributory

Social History: N/A

History of Present Illness:

who was involved a MVC requiring ex-lap, ileocecectomy c/b hemoperitoneum requiring takeback < 24 hours. Eventually this patient presented with a suspect enteric fistula and liver abscess which then the transplant surgical service did an ex-lap, drainage of abscess and ileocolectomy with ileocolonic anastamosis. During this last hospitalization, his abscess was polymicrobial and recieved V/C/F. Eventually his antibiotics were switched over to Augmentin on discharge. He was last seen approximately on at which time a CT of the abdomen revealed a marked improvement the abscess cavity with a residual fluid collection measuring 6.7 x 3.5 cm. His last remaining drain was removed at that time as it was only putting out 5 cc/day of serous fluid. Per ID, given the persistance of this collection, the decision was to continue augmentin for 2 more weeks, which it appears the patient did not do. Was doing well since then. No complaints. Good PO intake. 2 days ago developed abdominal pain, felt a "mass" where previous JP drain sites were. No N/V, +flatus. This AM developed fever of 101. Took some advil and tylenol and called and was informed to come to ED for further eval. Patient currently denies any other symptoms other than RUQ abdominal pain. Of note patient has been slowly tapering off pain medications since last year.

Admission Vital Signs:

General Appearance	NAD
Blood Pressure	119/93 mmHg
Heart Rate	114 bpm
Respiratory Rate	14 breaths/min
Temperature	96.7°F
Oxygen Saturation	96% RA

Admission Laboratory Results:

• WBC: 12.5

• Glucose: 106

Admission Medications:

Total of **9** medications on admission:

• OxycoDONE (Immediate Release) 7.5 mg PO Q6H:PRN pain

• Acetaminophen mg PO Q8H:PRN pain maximum 3 grams daily

• Docusate Sodium 100 mg PO BID

• Senna 1 TAB PO BID:PRN constipation

• Milk of Magnesia 30 mL PO PRN constipation

• Calcium Carbonate 500 mg PO TID

• Vitamin D 400 UNIT PO DAILY

• Multivitamins 1 TAB PO DAILY

• Ibuprofen 600 mg PO Q8H:PRN pain

Unit Admission - Transplant

Admission Time: October 25, 2117 at 10:53 PM

The patient was admitted to **Transplant** ward. The patient stayed in this unit until **2117-10-29 14:41:49**, for a total duration of **3 days 15 hours 48 minutes**. During this time, various procedures, laboratory tests, and microbiology events were performed.

Procedure(s) Performed: October 26, 2117 at 12:00 AM

1 procedure(s) performed (Source: ICD):

Discharge Summary

Discharge Time: October 29, 2117 at 02:41 PM

The patient was discharged from **Transplant** with disposition to **Home**.

Major Procedure(s) During Admission: Abdominal abscess pigtail drain

Known Allergies: Penicillins

Detailed Allergy List:

• Penicillins

Discharge Diagnoses:

Primary Diagnoses:

• Right mid intra-abdominal abscess (citrobacter and Ecoli isolated)

Complete Diagnosis List:

• Other postoperative infection

• Peritoneal abscess

• Other and unspecified Escherichia coli [E. coli]

• Other specified bacterial infections in conditions classified elsewhere and of unspecified site, other gram-negative organisms

• Intestinal bypass or anastomosis status

• Personal history of traumatic fracture

• Surgical operation with anastomosis, bypass, or graft, with natural or artificial tissues used as implant causing abnormal patient reaction, or later complication, without mention of misadventure at time of operation

Hospital Course:

w h/o MVC ex-lap, ileocecetomy developed liver abscess and enteric fistula s/p debridement and ileocolectomy. Patient had large fluid collection before drain was pulled presented with fevers, elevated LFT and new onset abdominal pain near fluid collection, worrisome for infected fluid collection and/or new liver abscess. Other ddx included cholecystitis and abscess near ileocolonic anastamosis. He was pan cultured and started on IV Vanco, Cipro and Flagyl. CT Abd/Pelvis with PO and IV contrast was done showing 7.5 x 3.5 x 13.3 cm (TV x AP x CC) subhepatic collection extending up to the anterolateral abdominal wall the region of the prior drain. The previous perihepatic collection located more posteriorly was nearly resolved with a small amount of residual fluid remaining. On he had a temperature spike to 102. He then underwent CT-guided placement of an 8 catheter inside right mid abdomen abscess. There was no communication of the adjacent bowel was demonstrated. Drainage was from collection was sent to microbiology. Drain output was purulent. He remained afebrile with wbc decreasing to 5.5 from 12. Drain output averaged 40cc/d then decreased to 20cc/d. Drain was flushed with saline and flush came out of drain insertion site. Drain output decreased to scant output. Micro isolated pansensitive Citrobacter and E. coli. ID was consulted and recommended oral Cipro 500mg bid and Flagyl 500mg tid for 2 weeks then f/u CT. Instructions for drain care were provided. Drain flushes were stopped. He felt well and was discharged to home.

Microbiology Findings:

Blood cultures: negative to date, unfinalized. rectal swab VRE negative. 10:00 am ABSCESS HEPATIC ABSCESS. GRAM STAIN (Final : 3+ per 1000X FIELD): POLYMORPHONUCLEAR LEUKOCYTES. 4+ (>10 per 1000X FIELD): GRAM POSITIVE COCCI. PAIRS, CHAINS, AND CLUSTERS. 2+ per 1000X FIELD): GRAM POSITIVE ROD(S). 2+ per 1000X FIELD): GRAM NEGATIVE ROD(S). WOUND CULTURE (Preliminary): This culture contains mixed bacterial types (>=3) so an abbreviated workup is performed. Any growth of P.aeruginosa, S.aureus and beta hemolytic streptococci will be reported. IF THESE BACTERIA ARE NOT REPORTED BELOW, THEY ARE NOT PRESENT this culture.. WORK UP PER . CITROBACTER FREUNDII COMPLEX. SPARSE GROWTH. This organism may develop resistance to third generation cephalosporins during prolonged therapy. Therefore, isolates that are initially susceptible may become resistant within three to four days after initiation of therapy. For serious infections, repeat culture and sensitivity testing may therefore be warranted if third generation cephalosporins were used. ESCHERICHIA COLI. SPARSE GROWTH. Cefazolin interpretative criteria are based on a dosage regimen of 2g every 8h.
